**The concentrations of each isomer should be added if multiple isomers are present and compared to the total screening level.

The > column is used to flag exceedences as marked

Exposure Limit Definitions

TWA=Time Weighted Average (8hr). STEL=Short Term Exposure Limit.

As defined in section 5.1 of the OHS (Occupational Health and Safety) Regulation.

Agency Definitions

ACGIH= American Conf. of Governmental Industrial Hygienists

Reference

ACGIH= American Conf. of Governmental Industrial Hygienists, Documentation of the Threshold

Limit Values (TLVs).... Updated 2018/07/03

Toxicity Class (EPA Regional Screening Levels (RSL) Table, Nov 2018)Carcinogenic (C) Exceedence

Value exceeds the theoretical risk that 1 additional case of cancer will occur in a population of 1 million than statistically expected. Thus is a theoretical risk and not an actual epidemiological one.

NonCarcinogenic (NC) Exceedence

Value exceeds the theoretical risk that 1 in a population of 100,000 will experience deliterious health effects. Thus is a theoretical risk and not an actual epidemiological one.

Compound Exposure Definitions

NE= No Limit Established

LFC= Lowest Feasible Concentration

NS= No Screening Value

Qualifier Definitions

ND = Non Detect

B = Compound also found in method blank.

E= Estimated concentration exceeding upper calibration range.

D= Result reported from diluted analysis.
