\*\*The concentrations of each isomer should be added if multiple isomers are present and compared to the total screening level.

The > column is used to flag exceedences as marked

**Exposure Limit Definitions**

RSL= Regional Screening Level at Target Hazard Quotient (THQ) =0.1 if available, otherwise THQ = 1

**Agency Definitions**

USEPA= United States Environmental Protection Agency

**Reference**

EPA Regionional Screening Levels (RSL) Table, Nov 2018

**Toxicity Class (EPA Regionional Screening Levels (RSL) Table, Nov 2018)****Carcinogenic (C) Exceedence**

Value exceeds the theoretical risk that 1 additional case of cancer will occur in a population of 1 million than statistically expected. Thus is a theoretical risk and not an actual epidemiological one.

**NonCarcinogenic (NC) Exceedence**

Value exceeds the theoretical risk that 1 in a population of 100,000 will experience deliterious health effects. Thus is a theoretical risk and not an actual epidemiological one.

**Compound Exposure Definitions**

NE= No Limit Established

LFC= Lowest Feasible Concentration

NS= No Sscreening Value

**Qualifier Definitions**

ND = Non Detect

B = Compound also found in method blank.

E= Estimated concentration exceeding upper calibration range.

D= Result reported from diluted analysis.
