Arthrospore formers

Natural Habitat	◆ Many Basidiomycetes form arthrospores during their mycelial stage. <i>Geotrichum</i> and <i>Oidiodendron</i> are typical ascomycete arthrospore formers. Arthrospores are formed by microfungi, and yeast-like fungi. Please refer to individual descriptions of these fungi for more information.
Suitable Substrates in the Indoor Environment	◆ Paper ◆ Soil ◆ Textiles
Potential Opportunist or Pathogen	◆ Depends on genera and species
Potential Toxins Produced	◆ Depends on genera and species
Additional Comments	◆ Arthrospores are disarticulated cells of a formerly vegetative filament that function as spores.
